This book provides a straightforward introduction to the spectroscopy of diatomic molecules and is written at the level of intermediate undergraduate courses in physical chemistry and chemical physics Following a general introduction to the subject the second chapter lays out the essential quantum mechanical tools required to understand spectroscopy

Very little previous knowledge is assumed mathematics is kept to a minimum the treatment being only semi quantitative Professor Brown succeeds admirably The clear diagrams in the margin facilitate understanding of the subject matter Book Watch The Chemical Intelligencer Vol 5 No 2 April 1999 From the Back Cover Molecular spectroscopy
