Nowadays bioinformaticians and geneticists are faced with myriad high throughput data usually presenting the characteristics of uncertainty high dimensionality and large complexity These data will only allow insights into this wealth of so called omics data if represented by flexible and scalable models prior to any further analysis At the interface between statistics and machine learning probabilistic graphical models PGMs represent a powerful formalism About the Author Raphael Mourad Post doctoral Research Fellow Department of Human Genetics University of Chicago Christine Sinoquet is an Associate Professor in Computer Science at the University of Nantes France where she works in the area of bi
