Biased Signaling in Physiology Pharmacology and Therapeutics nbsp is a unique and essential reference for the scientific community concerning how conformational dependent activation is a common phenomenon across many classes of receptors or signaling molecules It discusses the role of conformational dynamics in leading to signaling bias across different classes of receptors and signaling molecules By providing a broader view of signaling bias this re

markedly contributes to our understanding of biochemical and cellular mechanisms of diseases that should result in improved therapies for treating diseases I highly recommend this book to any scientists working in the field of receptor biology Four Star
