By Robert R. Crichton : Biological Inorganic Chemistry: An Introduction coordination compounds or complexes are molecules and extended solids that contain bonds between a transition metal ion and one or more ligands in forming these college of arts and sciences chemistry detailed course offerings time schedule are available for summer quarter 2017; autumn quarter 2017; chem 110 preparation for Biological Inorganic Chemistry: An Introduction:

The importance of metals in biology the environment and medicine has become increasingly evident over the last twenty five years The study of the multiple roles of metal ions in biological systems the rapidly expanding interface between inorganic chemistry and biology constitutes the subject called Biological Inorganic Chemistry The present text written by a biochemist with a long career experience in the field particularly iron and copper presents an introduction The writing of my colleague Bob Crichton is simply exquisite clear and precise yet light and pleasant every chapter is a little story about the metal under consideration with the hardcore chemistry and biochemical principles alternating with interesting
