By Günter Mayer : The Chemical Biology of Nucleic Acids nucleic acids are biopolymers or large biomolecules essential to all known forms of life they are composed of monomers which are nucleotides made of three online biology dictionary n to nyxis meanings of biology terminology and abbreviations starting with the letter n The Chemical Biology of Nucleic Acids:

With extensive coverage of synthesis techniques and applications this text describes chemical biology techniques which have gained significant impetus during the last five years It focuses on the methods for obtaining modified and native nucleic acids and their biological applications Topics covered include chemical synthesis of modified RNA expansion of the genetic alphabet in nucleic acids by creating new base pairs chemical biology of This book will be a

useful resource for post graduates seeking to gain an overview of the subject as well as for specialists in specific areas of chemical biology ChemBioChem Book s 2010 Gunther Mayer and the contributors have assembled
