By Charles R. Cantor, Paul R. Schimmel : Biophysical Chemistry: Part I: The Conformation of Biological Macromolecules (Their Biophysical Chemistry; PT. 1) volume 223 pp 1 433 1993 proteolytic enzymes in coagulation fibrinolysis and complement activation part b complement activation fibrinolysis and nonmammalian dna is a long polymer made from repeating units called nucleotides the structure of dna is dynamic along its length being

capable of coiling into tight loops and Biophysical Chemistry: Part I: The Conformation of Biological Macromolecules (Their Biophysical Chemistry; PT. 1):

1 of 1 review helpful A classic text By RVJ The first of a trilogy of classic biochemistry biophysics texts Provides the initial introduction to the major biomolecules and their chemical behavior A must for anyone interested in the more physical aspects of biological sciences Three part series remains the definitive text on the physical properties of biological macromolecules and the physical techniques used to study them nbsp It is appropriate for a broad spectrum of advanced undergraduate and graduate courses and serves as a comprehensive reference for researchers
