By Charles R. Cantor, Paul R. Schimmel : Biophysical Chemistry, Part 2: Techniques for the Study of Biological Structure and Function (Pt. 2) dna is a long polymer made from repeating units called nucleotides the structure of dna is dynamic along its length being capable of coiling into tight loops and structure and function of secretory cells a fahn department of plant sciences the hebrew university of jerusalem 91904 jerusalem israel i

introduction Biophysical Chemistry, Part 2: Techniques for the Study of Biological Structure and Function (Pt. 2):

1 of 1 review helpful Biophysics Bible By JP Z uacute ntilde iga This book is the keystone for understanding more than the hard biophysics based in formulas and advances calculus is a very good book that explain every biological process at the light of biophysics in other words you will see protein structure DNA structure membrane dynamics and organiation etc through its real basis that is a physical process Becaus Three part series remains the definitive text on the physical properties of biological macromolecules and the physical techniques used to study them nbsp It is appropriate for a broad spectrum of advanced undergraduate and graduate courses and serves as a comprehensive reference for researchers
