**By Friedrich Marks, Ursula Klingmüller, Karin Müller-Decker : Cellular Signal Processing: An Introduction to the Molecular Mechanisms of Signal Transduction** the 2015 nobel prize in chemistry was awarded to tomas lindahl paul modrich and aziz sancar for their work on the molecular mechanisms of dna repair processes bimm 118 pharmacology 4 basics of pharmacology such as drug absorption distribution metabolism and elimination concepts in toxicology and Cellular Signal Processing: An Introduction to the Molecular Mechanisms of Signal Transduction:

11 of 11 review helpful Exceptionally Well Done in Scope and Detail By Dr Terrence McGarty Cellular Signal Processing presents a well structured and comprehensive discussion of all of the elements in cell signalling The book provides a superb source of information as well as structure to understand the nuances of many of the cellular signalling mechanisms It is an excellent desk reference which one can come back to time Cellular Signal Processing is intended for use in signal transduction courses for undergraduate and graduate students It offers a unifying view of cell signaling that is based on the concept of protein interactions acting as sophisticated data processing networks that govern intracellular and extracellular communication The content is guided by three major principles that are central to signal transduction the protein network its energy supply and its ev This book would be highly useful to undergraduate students in medical bioinformatics or biological science that are studying or pursuing research into signal transduction network or systems biology nbsp This book would also appeal to graduate stu
