From Humana Press : Mitochondrial Disorders: Biochemical and Molecular Analysis (Methods in Molecular Biology, Vol. 837) eukaryotic cilia and flagella are hair like cellular appendages composed of specialised microtubules and covered by a specialised extension of the cellular membrane an open access journal publishing

research describing the discovery methods for discovery description analysis characterization and productionisolation of Mitochondrial Disorders: Biochemical and Molecular Analysis (Methods in Molecular Biology, Vol. 837):

Due to the complexity of the mitochondrial system and the myriad genes involved in their function the clinical manifestations of mitochondrial diseases are remarkably variable and heterogeneous The laboratory and clinical methodologies used to evaluate dysfunction may vary widely and thusly a systematic presentation of the numerous protocols that are applied to the assessment of these clinically and genetically heterogeneous disorders has proven to be essential nb From the Back Cover Due to the complexity of the mitochondrial system and the myriad genes involved in their function the clinical manifestations of mitochondrial diseases are remarkably variable and heterogeneous The laboratory and clinical methodologies use
