By Pradipta Maji, Sushmita Paul : Scalable Pattern Recognition Algorithms: Applications in Computational Biology and Bioinformatics cs 101 introduction to computing principles 3 5 units introduces the essential ideas of

computing data representation algorithms programming `computer non negative matrix factorization nmf or nmmf also non negative matrix approximation is a group of algorithms in multivariate analysis and linear algebra where a Scalable Pattern Recognition Algorithms: Applications in Computational Biology and Bioinformatics:`

This book addresses the need for a unified framework describing how soft computing and machine learning techniques can be judiciously formulated and used in building efficient pattern recognition models The text reviews both established and cutting edge research providing a careful balance of theory algorithms and applications with a particular emphasis given to applications in computational biology and bioinformatics Features integrates different soft computing a From the book reviews `This book provides unique insights into how various soft computing and machine learning methods can be formulated and used in building efficient pattern recognition models hellip This is a great resource to students and resear`
