From Springer : Atomic Hypothesis and the Concept of Molecular Structure (Tertiary Level Biology) part i principles of molecular recognition the function of most proteins is controlled by small molecule ligands that reversibly bind to acquired trait a phenotypic characteristic acquired during growth and development that is not genetically based and therefore cannot be passed on to the next Atomic Hypothesis and the Concept of Molecular Structure (Tertiary Level Biology):

Imagination and shrewd guesswork are powerful instruments for acquiring scientific knowledge 1 H van t Hoff The last decades have witnessed a rapid growth of quantum chemistry and a tremendous increase in the number of very accurate ab initio calculations of the electronic structure of molecules yielding results of admirable accuracy This dramatic progress has opened a new stage in the quantum mechanical description of matter at the molecular level In the fi
