**By Suzanne Fyfe : Hyperspectral studies of seagrasses: Ecology, physiology, biochemistry and stress**

Hyperspectral studies of seagrasses: Ecology, physiology, biochemistry and stress:

Seagrass meadows are of economic importance and high conservation significance and offer a sensitive bioindicator for estuarine ecosystems Successful management depends on appropriate monitoring of the health and extent of seagrass meadows The research in this book advances the field of remote sensing of seagrasses and is applicable to plants more generally Hyperspectral reflectance studies are combined with ecophysiology and biochemistry to generate essential bas About the Author Suzanne Fyfe completed a PhD at the University of Wollongong in 2004 Her research interests cross the fields of biogeography remote sensing ecology and plant physiology Sue rsquo s love of plants and the ocean has spanned an almost 30 year c
