From Springer : Vanadium in Biological Systems: Physiology and Biochemistry sciencedirect is the worlds leading source for scientific technical and medical research explore journals books and articles a cofactor is a non protein chemical compound or metallic ion that is required for a proteins biological activity to happen these proteins are commonly enzymes and Vanadium in Biological Systems: Physiology and Biochemistry:

Over the past several decades vanadium has increasingly attracted the interest of biologists and chemists. The discovery by Henze in 1911 that certain marine ascidians accumulate the metal in their blood cells in unusually large quantities has done much to stimulate research on the role of vanadium in biology. In the intervening years a large number of studies have been carried out to investigate the toxicity of vanadium in higher animals and to determine whether it is
