0 of 0 review helpful Small and rigid pieces By Customer This was a requirement for my Organic Chem 1 course in college and it works pretty well Sometimes the bond pieces get stuck inside the atom pieces and I still haven't found a way to get them out The pieces are all very small and rigid so if you want to move around molecules it can be hard to rotate atoms and rings Overall it's not bad but I would suggest g These are economical sets and are also useful for laboratory work and teaching on biochemistry and organic chemistry With set 5000 you can construct a helix and B sheet of twenty peptide backbones and two nucleotide pairs adenine thymine and guanine-cytosine Of course simple organic compound can be easily assembled
